[HY]gienic [W]ashdown, EASY CLEAN – IP69K
Stainless steel 316L «PREMIUM» motors

0,12..1,5kW

Stainless steel Motors AISI 316L for food processing, pharmaceutical and other applications requiring extreme cleanliness and frequent washdowns

When food, beverage or pharmaceutical production plants are washed down, the motors - along with other parts - are often subjected to **high pressure water jets** (sometimes at high temperatures) or even more **aggressive cleaning agents**.

HYW stainless steel motors can withstand this operating condition, that on the contrary can cause damage to other kind of motor, or even contaminate the end product.

Unlike standard motors, the HYW range has **no cooling fins, no paint to chip or flake and no surface that will rust**. This means that waste products can be washed away easily leaving no residue and the motor can be used with **confidence in food processing areas**, even the rating plate is engraved on the outer NDE cover to reduce areas where bacteria can lurk. **where hygiene is essential.**

- 0,12..1,5kW – 4 poles*
- IEC 63..90 B5 B14, NEMA 56C*
- IP69K degree of protection*
- Class F – IC410 - DUTY S1*
- stainless steel 316L*
